

SAFETY DATA SHEET

1. Identification

1. Identification			
Product identifier	Chlorine		
Other means of identification			
SDS number	AUC-005		
Synonyms	Liquid Chlorine * Elemental Chlorine	* Molecular chlorine * Compressed Chlorine Gas	
Recommended use	Production of chlorinated inorganic and organic chemicals; bleaching agent for paper, textiles and fabrics; used in water purification, sewage disinfection and food processing.		
Recommended restrictions	Professional use only		
Manufacturer/Importer/Supplier	Distributor information		
Manufacturer			
Company name Address	Allied Universal Corporation 3901 N.W. 115th Avenue Miami, FL 33178 United States		
Telephone		05-888-2623	
		36-522-0207	
Website E-mail	www.allieduniversal.com Not available.		
Contact person	Operations Department		
Emergency phone number	CHEMTREC 1-80	00-424-9300 (US/Canada) 703-527-3887 (International)	
Supplier	Refer to Manufacturer		
2. Hazard(s) identification			
Physical hazards	Oxidizing gases	Category 1	
	Gases under pressure	Liquefied gas	
Health hazards	Acute toxicity, inhalation	Category 2	
	Skin corrosion/irritation	Category 1	
	Serious eye damage/eye irritation	Category 1	
	Specific target organ toxicity, single	exposure Category 3 respiratory tract irritation	
Environmental hazards	Hazardous to the aquatic environme acute hazard	nt, Category 1	
OSHA defined hazards	This mixture does not meet the class	sification criteria according to OSHA HazCom 2012.	
Label elements			
Signal word	Danger		
Hazard statement		Contains gas under pressure; may explode if heated. Causes Fatal if inhaled. May cause respiratory irritation. Very toxic to	
Precautionary statement			

Keep/Store away from clothing and other combustible materials. Keep reduction valves free from grease and oil. Do not breathe gas. Use only outdoors or in a well-ventilated area. Wear respiratory protection. Wash hands and face thoroughly after handling. Wear protective gloves/clothing and eye/face protection. Avoid release to the environment.

Prevention

Response	Specific treatment is urgent (see this label). IF SWALLOWED: Rinse mouth. Do NOT induce vomiting. IF ON SKIN (or hair): Take off immediately all contaminated clothing. Rinse skin with water/shower. Wash contaminated clothing before reuse. IF INHALED: Remove person to fresh air and keep comfortable for breathing. IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing. Immediately call a POISON CENTER or doctor/physician. In case of fire: Stop leak if safe to do so. Collect spillage.
Storage	Store in a well-ventilated place. Keep container tightly closed. Store locked up. Protect from sunlight.
Disposal	Dispose of contents/container in accordance with local/regional/national/international regulations.
Hazard(s) not otherwise classified (HNOC)	No OSHA defined hazard classes. Other hazards which do not result in classification: Toxic fumes, gases or vapors may evolve on burning. Chlorine is extremely corrosive to most metals in the presence of moisture (> 150 ppm water and/or -40 degrees F dew point) or at high temperatures. Combines with water to produce hydrochloric and hypochlorous acid. Severe, short-term exposures may cause long-lasting respiratory effects, e.g. Reactive Airways Dysfunction (RADS), due to the material's severe irritating properties. Contact with liquefied gas might cause frostbites, in some cases with tissue damage. Direct contact with liquefied gas may cause frostbite and corrosive injury to the eyes.
Supplemental information	Keep away from heat. Make sure valves on gas cylinders are fully opened when gas is used. Open cylinder valve slowly to prevent rapid decompression and damage to valve seat. Use smallest possible amounts in designated areas with adequate ventilation. Liquid chlorine lines must have suitable expansion chambers between block valves due to high coefficient of expansion. Shut flow off at cylinder valve and not just at the regulator after use. Use a suitable hand truck to move cylinders; do not drag, roll, slide, or drop. Secure cylinders in an upright position at all times, close all valves when not in use. Establish written emergency plan and special training where chlorine is used. Regularly inspect and test piping and containers used for chlorine service.

3. Composition/information on ingredients

Substances **Chemical name** Common name and synonyms CAS number Chlorine Liquid Chlorine 7782-50-5 Elemental Chlorine Molecular chlorine **Compressed Chlorine Gas** 4. First-aid measures Inhalation Take proper precautions to ensure your own safety before attempting rescue (e.g. wear appropriate protective equipment, use the buddy system). IF INHALED: Remove person to fresh air and keep comfortable for breathing. If breathing is difficult, trained personnel should give oxygen. If breathing stops, provide artificial respiration. Induce artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. Immediately call a POISON CENTER or doctor/physician. IF ON SKIN (or hair): Take off immediately all contaminated clothing. Rinse skin with Skin contact

water/shower. Do not rub area of contact. Gently remove clothing or jewelry. Carefully cut around clothing that sticks to the skin. Wash contaminated clothing before reuse. Immediately call a POISON CENTER or doctor/physician. Discard any shoes or clothing items that cannot be decontaminated. IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present Eye contact and easy to do. Continue rinsing. Take care not to rinse contaminated water into the unaffected eye or onto the face. Do not rub eyes. Immediately call a POISON CENTER or doctor/physician. Not an expected route of entry under normal conditions of use. Ingestion If ingestion of a large amount does occur, call a poison control center immediately. Do not induce vomiting. Never give anything by mouth to a victim who is unconscious or is having convulsions.

%

99.5

Most important symptoms/effects, acute and delayed	Fatal if inhaled. Immediately dangerous to life or health (IDLH) at 10 ppm. May cause severe irritation to the nose, throat, and respiratory tract. Symptoms may include coughing, choking and wheezing. Could also cause tightness in the chest, a blue discolouration of the skin (cyanosis), severe headache, nausea, vomiting and fainting. Inhalation could result in pulmonary edema (fluid accumulation). Symptoms of pulmonary edema (chest pain, shortness of breath) may be delayed. May result in unconsciousness and possibly death. Severe, short-term exposures may cause long-lasting respiratory effects, e.g. Reactive Airways Dysfunction (RADS), due to the material's severe irritating properties. With this condition, asthma-like symptoms and increased reactivity of the airways is experienced. Direct skin contact may cause corrosive skin burns, deep ulcerations and possibly permanent scarring. If product is sprayed directly on skin, symptoms of frostbite may be experienced including numbness, prickling and itching. Corrosive to the eyes and may cause severe damage including blindness. Symptoms may include stinging, tearing, redness, swelling, and blurred vision. If product is sprayed directly into the eyes, could cause freezing of the eye.
Indication of immediate medical attention and special treatment needed	Immediate medical attention is required. Fatal if inhaled. Causes chemical burns. Symptoms may be delayed. Keep victim under observation. Medical supervision for minimum 48 hours. Provide general supportive measures and treat symptomatically.
General information	First-aid procedures should be reviewed by appropriate personnel familiar with chlorine and its conditions of use in the workplace. Ensure that medical personnel are aware of the material(s) involved, and take precautions to protect themselves. Show this safety data sheet to the doctor in attendance.
5. Fire-fighting measures	
Suitable extinguishing media	Extinguishing media - small fires: Dry chemicals. Carbon dioxide (CO2). Extinguishing media - large fires: Water Spray or Fog. Foam.
Unsuitable extinguishing media	Use water with caution. May react with water. Do not use direct water spray or water jet as an extinguisher, as this will spread the fire.
Specific hazards arising from the chemical	Pressurized container may explode when exposed to heat or flame. May react to cause fire and or explosion upon contact with many organic compounds, ammonia, hydrogen and with many metals at elevated temperatures. Chlorine will support the burning of most combustible materials. Combines with water to produce hydrochloric and hypochlorous acid. Liquefied chlorine can accumulate static charge by flow or agitation, since it has a very low electrical conductivity. Chlorine containers or cylinders may vent rapidly or rupture violently, if exposed to fire or excessive heat for a sufficient period of time. Intense local heat (above 200 deg C) on the steel walls of chlorine cylinders can cause an iron/chlorine fire resulting in rupture of the container. Vapors are heavier than air and may spread along floors. Toxic fumes, gases or vapors may evolve on burning.
Special protective equipment and precautions for firefighters	Firefighters should wear full protective clothing including self contained breathing apparatus. Firefighters must use standard protective equipment including flame retardant coat, helmet with face shield, gloves, rubber boots, and in enclosed spaces, SCBA. A full-body chemical resistant suit should be worn.
Fire fighting equipment/instructions	Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Move containers from fire area if you can do so without risk. Remove combustible materials. Stop the flow of gas before extinguishing fire, if safe to do so. Use water spray to direct escaping gas away from workers if it is necessary to stop the flow of gas. Cool containers exposed to heat with water spray and remove container, if no risk is involved. Stay away from ends of cylinders and withdraw immediately in case of rising sounds or discolouration of containers. Do not allow run-off from fire fighting to enter drains or water courses. Dike for water control.
Specific methods	Use standard firefighting procedures and consider the hazards of other involved materials.
General fire hazards	The product itself does not burn. However, material is considered to be an oxidizing gas. Supporter of combustion and can intensify a fire.
Hazardous combustion products	Toxic chemicals are formed when combustible materials burn in chlorine. These may include corrosive hydrogen chloride gas and other chlorine compounds.
6. Accidental release meas	sures
Personal precautions.	Restrict access to area until completion of clean-up. Keep unnecessary personnel away. Keep

Personal precautions, protective equipment and emergency procedures Restrict access to area until completion of clean-up. Keep unnecessary personnel away. Keep people away from and upwind of spill/leak. Consider initial downwind evacuation for at least 500 meters (1/3 mile). Ensure clean-up is conducted by trained personnel only. Ventilate closed spaces before entering them. Many gases are heavier than air and will spread along ground and collect in low or confined areas (sewers, basements, tanks). Eliminate all ignition sources (no smoking, flares, sparks, or flames in immediate area). Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Wear appropriate protective equipment and clothing during clean-up. For personal protection, see section 8 of the SDS.

Methods and materials for containment and cleaning up	Stop the flow of material, if this is without risk. Use only non-sparking tools. Keep combustibles (wood, paper, oil, etc.) away from spilled material. Remove or isolate incompatible materials as well as other hazardous materials. Do not spray leak with water since a reaction producing corrosive hypochlorous and hydrochloric acids occurs, which can aggravate the leak. May be absorbed and neutralized into solutions of caustic soda, or lime and placed in polypropylene, polyvinyl chloride, fibreglass or lead containers. Since hypochlorites are formed, the solutions must be treated with a reducing agent such as sodium sulfite before disposal. Do not immerse container in caustic solution.	
	Large Spills: Large uncontrollable leaks require environmental considerations and possible evacuation of the surrounding area. When possible draw off chlorine to process or disposal system .	
	Contact the proper local authorities.	
	For waste disposal, see section 13 of the SDS.	
Environmental precautions	Avoid release to the environment. Prevent entry into waterways, sewer, basements or confined areas. Contact local authorities in case of spillage to drain/aquatic environment.	
7. Handling and storage		
Precautions for safe handling	Establish written emergency plan and special training where chlorine is used.	
	Use only outdoors or in a well-ventilated area. Wear respiratory protection. Wear protective gloves/clothing and eye/face protection. See Section 8 of the SDS for Personal Protective Equipment. Do not breathe gas. Avoid contact with eyes, skin, and clothing. Regularly inspect and test piping and containers used for chlorine service. Liquid chlorine lines must have suitable expansion chambers between block valves due to high coefficient of expansion. Keep away from heat. Keep/Store away from clothing and other combustible materials. Keep reduction valves free from grease and oil. Use only chlorine compatible lubricants. Use smallest possible amounts in designated areas with adequate ventilation. Shut flow off at cylinder valve and not just at the regulator after use. Use a suitable hand truck to move cylinders; do not drag, roll, slide, or drop. Protect against physical damage. Wash hands after handling and before eating.	
Conditions for safe storage, including any incompatibilities	Store in steel pressure cylinders in a cool, dry area outdoors or in well-ventilated, detached or segregated areas of non-combustible construction. Keep container tightly closed. Store locked up. Protect from sunlight. Storage area should be clearly identified, clear of obstruction and accessible only to trained and authorized personnel. Do not store near combustible materials. Wood and other organic materials should not be used on floors, structural materials, or ventilation systems in the storage area. Store away from incompatible materials (see Section 10 of the SDS). Secure cylinders in an upright position at all times, close all valves when not in use. Use a "first in - first out" inventory system to prevent full cylinders from being stored for excessive periods of time. Store at temperatures not exceeding 55°C (131°F). For the specified temperature the system pressure is 225 psig (1551 kPa).	
8. Exposure controls/personal protection		

Occupational exposure limits

Material	Туре	Value	
Chlorine (CAS 7782-50-5)	Ceiling	3 mg/m ³	
		1 ppm	
US. ACGIH Threshold Limit	Values		
Material	Туре	Value	
Chlorine (CAS 7782-50-5)	STEL	0.4 ppm/0.29 mg/m ³	
	TWA	0.1 ppm/1.16 mg/m ³	
US. NIOSH: Pocket Guide to	Chemical Hazards		
Material	Туре	Value	
Chlorine (CAS 7782-50-5)	Ceiling	1.45 mg/m ³	
	-	0.5 ppm	
logical limit values No biological exposure limits noted for the ingredient(s).		the ingredient(s).	
Dosure guidelines The NIOSH IDLH concentration for Chlorine is 10 ppm.			

Appropriate engineering controls	Ensure adequate ventilation, especially in confined areas. Good general ventilation (typically 10 air changes per hour) should be used. Ventilation rates should be matched to conditions. If applicable, use process enclosures, local exhaust ventilation, or other engineering controls to maintain airborne levels below recommended exposure limits. If exposure limits have not been established, maintain airborne levels to an acceptable level. In case of insufficient ventilation, wear suitable respiratory equipment.	
Individual protection measures,	such as personal protective equipment	
Eye/face protection	Wear eye/face protection. Chemical goggles are recommended. Wear a full-face respirator, if needed. A full face shield may also be necessary. Eye wash fountains are required.	
Skin protection		
Hand protection	Wear appropriate chemical-resistant gloves. Advice should be sought from glove suppliers.	
Other	Wear appropriate chemical-resistant clothing. Where contact is likely, wear chemical-resistant gloves, a chemical suit and rubber boots. Eye wash facilities and emergency shower must be available when handling this product.	
Respiratory protection	Up to 5 ppm: A NIOSH/MSHA approved air-purifying respirator with the appropriate chemical cartridges or a positive-pressure, air-supplied respirator may be used to reduce exposure. Up to 10 ppm: A SAR (supplied air respirator) operated in a continuous flow mode or powered air purifying respirator with cartridge(s); a full facepiece chemical cartridge respirator with cartridge(s); a gas mask with canister; a full facepiece SCBA (self contained breathing apparatus) ; or a full facepiece SAR may be used to reduce exposure. EMERGENCY OR PLANNED ENTRY INTO UNKNOWN CONCENTRATIONS OR IDLH CONDITIONS: Positive pressure, full-facepiece SCBA; or positive pressure, full-facepiece SAR with an auxiliary positive pressure SCBA. Respirators should be selected based on the form and concentration of contaminants in air, and in accordance with OSHA (29 CFR 1910.134). Advice should be sought from respiratory protection specialists.	
Thermal hazards	Wear appropriate thermal protective clothing, when necessary.	
General hygiene considerations	Do not breathe gas. Avoid contact with eyes, skin and clothing. Handle in accordance with good industrial hygiene and safety practice. Do not eat, drink or smoke when using the product. Wash hands before breaks and immediately after handling the product. Remove soiled clothing and wash it thoroughly before reuse. Inform laundry personnel of contaminant's hazards.	

9. Physical and chemical properties

<i>,</i> ,	•	
Appearance		
Physical state	Gas (or liquid under pressure).	
Form	Compressed liquefied gas.	
Color	Amber color; vaporizes to greenish, yellow gas.	
Odor	Pungent suffocating odor	
Odor threshold	0.02 - 3.4 ppm (detection)	
рН	Not applicable (reacts with water to form an acidic solution)	
Melting point/freezing point	-149.8 °F (-101 °C)	
Initial boiling point and boiling	-30.28 °F (-34.6 °C)	
Flash point	Not Applicable	
Evaporation rate	Not Applicable.Gas at normal temperatures.	
Flammability (solid, gas)	The product is not flammable.	
Upper/lower flammability or exp	losive limits	
Flammability limit - lower (%)	Not Applicable	
Flammability limit - upper (%)	Not Applicable	
Explosive limit - lower (%)	Not available.	
Explosive limit - upper (%)	Not available.	
Vapor pressure	638.4 kPa @ 20°C (68°F) 4788 mm Hg @ 20°C (68°F)	
Vapor density	2.49 @ 0°C (32°F) (Air = 1)	
Relative density	3.21 kg/m³ @ 0°C (32°F)	
Matarial a survey Oblastica		

Material name: Chlorine

Solubility(ies)			
Solubility (water)	6.3 mg/l (Slightly soluble)		
Solubility (other)	Soluble in dimethylformamide, disulfur dichloride, benzene, chloroform, carbon tetrachloride, hexachlorobutadiene, tetrachloroethane, pentachloroethane, chlorobenzene, nitrobenzene, glacial acetic acid (99.84%) and other chlorides		
Partition coefficient (n-octanol/water)	Not applicable (gas)		
Auto-ignition temperature	Not available.		
Decomposition temperature	Not available.		
Viscosity	Not available.		
Viscosity temperature	Not Applicable (Gas)		
Other information			
Critical temperature	290.75 °F (143.75 °C)		
Explosive properties	Not explosive.		
Molecular weight	70.91		
Oxidizing properties	Strong oxidizing agent because of its electron-transfer capabilities. Supporter of combustion and can intensify a fire. Note, that Chlorine does not yield oxygen or any other oxidizing substance.		
Specific gravity	0.003 @ 0°C (32°F)		
10. Stability and reactivity			
Reactivity	Combines with water to produce hydrochloric and hypochlorous acid. These acids can decompose to hydrochloric acid and oxygen. Contact with combustible material may cause fire.		
Chemical stability	Material is stable under normal conditions.		
Possibility of hazardous reactions	Hazardous polymerization does not occur.Chlorine is extremely corrosive to most metals in the presence of moisture (> 150 ppm water and/or -40 degrees F dew point) or at high temperatures. Will support or initiate combustion or explosion of organic matter and other oxidizable material. Note, that Chlorine does not yield oxygen or any other oxidizing substance. Liquid or gaseous chlorine can react violently with many combustible materials, and other chemicals, including water. Metal halides, carbon, finely divided metals and sulfides can accelerate the rate of chlorine reactions. Chlorine reacts with carbon monoxide to produce toxic phosgene, and sulfur dioxide to produce sulfuryl chloride. Intense local heat (above 200 deg C) on the steel walls of chlorine cylinders can cause an iron/chlorine fire resulting in rupture of the container.		
Conditions to avoid	Keep away from combustible materials. Avoid contact with incompatible materials. Keep away from heat. Do not use in areas without adequate ventilation.		
Incompatible materials	Tin; Metals; Sulfides; Titanium. Reacts with most metals at high temperatures. Reacts with water to produce hydrochloric aids, which are corrosive to most metals. Ammonia, elemental metals, certain metal hydroxides, carbides, nitrides, oxides, phosphides and sulfides, easily oxidized materials, organic materials, reducing agents, alkalis and unstable and reactive compounds.		
Hazardous decomposition products	Hydrogen chloride gas. Hydrochloric acid. Hypochlorous acid.		

11. Toxicological information

Information on likely routes of exposure

Inhalation	Very toxic by inhalation. Fatal if inhaled. May cause severe irritation to the nose, throat, and respiratory tract.
Skin contact	Causes skin burns. Contact with liquefied gas might cause frostbites, in some cases with tissue damage. Not expected to be absorbed through the skin.
Eye contact	Causes severe eye burns. If product is sprayed directly into the eyes, could cause freezing of the eye.
Ingestion	Not an expected route of entry under normal conditions of use.

Most important symptoms/effects, acute and delayed	Fatal if inhaled. Immediately dangerous to life or health (IDLH) at 10 ppm. May cause severe irritation to the nose, throat, and respiratory tract. Symptoms may include coughing, choking and wheezing. Could also cause tightness in the chest, a blue discolouration of the skin (cyanosis), severe headache, nausea, vomiting and fainting. Inhalation could result in pulmonary edema (fluid accumulation). Symptoms of pulmonary edema (chest pain, shortness of breath) may be delayed. May result in unconsciousness and possibly death. Severe, short-term exposures may cause long-lasting respiratory effects, e.g. Reactive Airways Dysfunction (RADS), due to the material's severe irritating properties. With this condition, asthma-like symptoms and increased reactivity of the airways is experienced. Direct skin contact may cause corrosive skin burns, deep ulcerations and possibly permanent
	scarring. If product is sprayed directly on skin, symptoms of frostbite may be experienced including numbness, prickling and itching.
	Corrosive to the eyes and may cause severe damage including blindness. Symptoms may include stinging, tearing, redness, swelling, and blurred vision. If product is sprayed directly into the eyes, could cause freezing of the eye.

Information on toxicological effects

Acute toxicity

Hazardous by OSHA criteria. Classification: Acute Toxicity (inhalation - gas) - Category 2. Fatal if inhaled. See below for individual ingredient acute toxicity data

See below for individual ingredient acute toxicity data.			
Product	Species	Test Results	
Chlorine (CAS 7782-50-5)			
Acute			
Dermal			
LD50	Rabbit	No data in literature.	
Inhalation			
LC50	Rat	147 ppm, 4 Hours	
Oral			
LD50	Rat	No data in literature.	
Skin corrosion/irritation	Hazardous by OSHA criteria. Classification: Skin corrosion/irritation - Category 1. Causes severe skin burns.		
Serious eye damage/eye irritation	Hazardous by OSHA criteria. Classification: Serious eye damage/eye irritation - Category 1. Causes serious eye damage.		
Respiratory or skin sensitization	n		
Respiratory sensitization	This product is not expected to cause respiratory sensitization.		
Skin sensitizer	This product is not expected to cause skin sensitization.		
Germ cell mutagenicity	Not expected to be mutagenic.		
Carcinogenicity	This product is not considered to be a carcinogen by IARC, ACGIH, NTP, or OSHA. See below ingredients present on regulatory lists.		
OSHA Specifically Regulate	ed Substances (29 CFR 1910.	1001-1050)	
Not listed.			
Reproductive toxicity	This product is not expected to cause reproductive or developmental effects.		
Specific target organ toxicity - single exposure	Hazardous by OSHA criteria. Classification: Specific Target Organ Toxicity (STOT), Single Exposure. Category 3. May cause respiratory irritation.		
Specific target organ toxicity - repeated exposure	Not expected to be hazardou	us by OSHA criteria.	
Aspiration toxicity	Not likely, due to the form of	the product. Not expected to be an aspiration hazard.	
Chronic effects	Prolonged or repeated exposure to low concentrations may cause drying and cracking of the skin respiratory effects, gum disorders and painless destruction of teeth Limited occupational studies with long-term exposure to low concentrations, have not shown significant respiratory effects. Long-term animal studies confirm that chlorine is a severe irritant to the upper and lower respiratory tract.		
12. Ecological information	1		

12. Ecological information

Ecotoxicity

Very toxic to aquatic life. See below for individual ingredient ecotoxicity data.

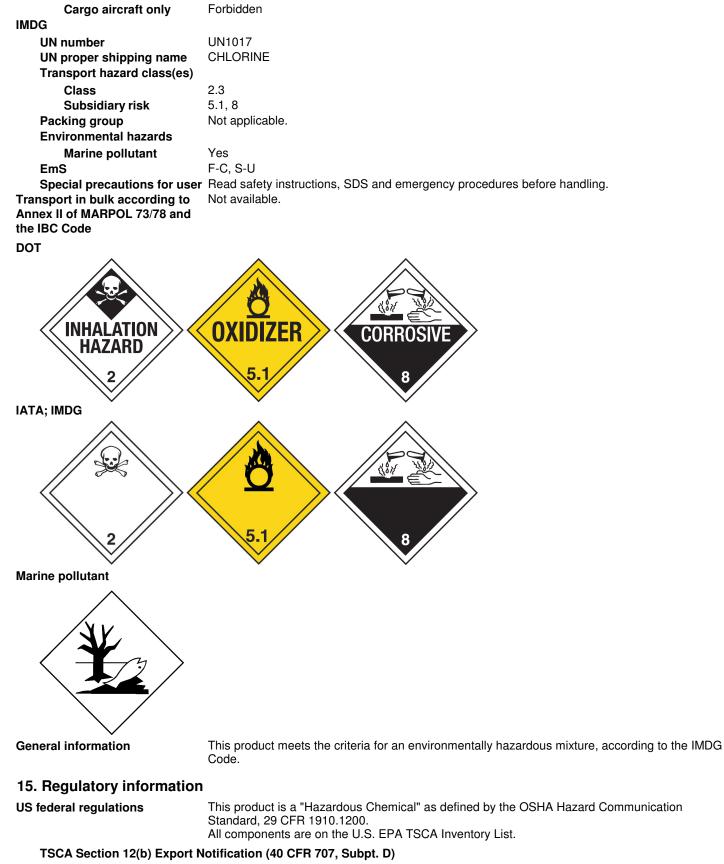

Product	Species		Test Results
Chlorine (CAS 7782-50-5)			
Aquatic			
Acute			
Crustacea	EC50	Water flea (Daphnia magna)	0.005 mg/l, 48 hours (mg Free Available Chlorine/L)
Fish	LC50	Rainbow trout,donaldson trout (Oncorhynchus mykiss)	0.014 mg/l, 96 hours
Persistence and degradability	Free chlorine is consumed upon contact with living tissues making measurement of biodegradation impossible and unnecessary.		
Bioaccumulative potential	Not expected to be bio accumulative.		
Mobility in soil	The product itself has not been tested.		
Other adverse effects	No other adverse environmental effects (e.g. ozone depletion, photochemical ozone creation potential, endocrine disruption, global warming potential) are expected from this component.		
13. Disposal consideration	ons		
Disposal instructions	Collect and reclaim or dispose in sealed containers at licensed waste disposal site. Dispose of contents/container in accordance with local/regional/national/international regulations.		
Local disposal regulations	Dispose in accordance with all applicable regulations.		
Hazardous waste code	The waste code should be assigned in discussion between the user, the producer and the waste		

Waste from residues / unused
productsDispose of in accordance with local regulations. Empty containers or liners may retain some
product residues. This material and its container must be disposed of in a safe manner (see:
Disposal instructions).Contaminated packagingEmpty containers should be taken to an approved waste handling site for recycling or disposal.
Since emptied containers may retain product residue, follow label warnings even after container is
